ABOUT ME

As a seasoned Backend Engineer, my expertise lies in the realm of software development, with a particular focus on crafting robust backend solutions. My track record is marked by numerous successful projects, where I have leveraged the power of cutting-edge frameworks such as Spring and Quarkus to deliver exceptional service. I am a staunch believer in the principle that "Languages don't scale, architecture scales," which drives my commitment to developing scalable codebases and reusable components that enhance efficiency across multiple projects. My passion for technology is fueled by an insatiable curiosity, and I am dedicated to applying this fervor to every endeavor I undertake in the tech landscape.
